

OpenSource is a group of software that reveals the source code of a program, making it possible to modify, modify, redistribute the source code completely, giving freedom to those who use it.

Open Source Community

- OSS users typically use software without paying licensing fees
- OSS users typically pay for training & support (competed)
- OSS users are responsible for paying/developing new improvements & any evaluations that they need; often cooperate with others to do so
- Goal: Active development community (like a consortium)

- Open source office software
- Open source operating systems
- Open source website software
- Open source development tools

Types of open source software

Open Source Software

Typical OSS development model

Creative Commons license

Open source licenses

- License that are popular and widely used or with strong communities
- Special purpose licenses
- Non-reusable licenses
- Superseded licenses

What is Open Source Software (OSS)?

- Software licensed to users with these freedoms
- Original term: "Free software" (confused with no-price)
- Antonyms: proprietary software, closed software

- Creative Commons (CC) is an American non-profit organization and international network.
- The organization has released several copyright licenses, known as Creative Commons licenses, free of charge to the public.
